

<< Are You Eating Enough Alkaline Foods? >>

Alkaline Acid Food Chart

This chart shows the contribution of various food substances to the acidifying of body fluids. In general, it is important to eat a diet that contains foods from both sides of the chart. Allergic reactions and other forms of stress tend to produce acids in the body. The presence of high acidity indicates that more of your foods should be selected from the alkalizing group.

Check your pH using our Personal pH Test Kit to find out if your selections are providing the desired balance.

We hope you will find this chart helpful on your journey to better health. If total vibrant health is your goal, your best investment is a telephone consultation with one of our Natural Healthcare Practitioners. They will build a program specifically tailored to your personal wellbeing along with knowledgeable product support.
